ROTFEFELLA

Moveable bindings since 2004

Text: Holger Fangel / Photo: Martin Andersen

Vision: Inspire to an active lifestyle outdoors for the many.
Secure top performances for the best.

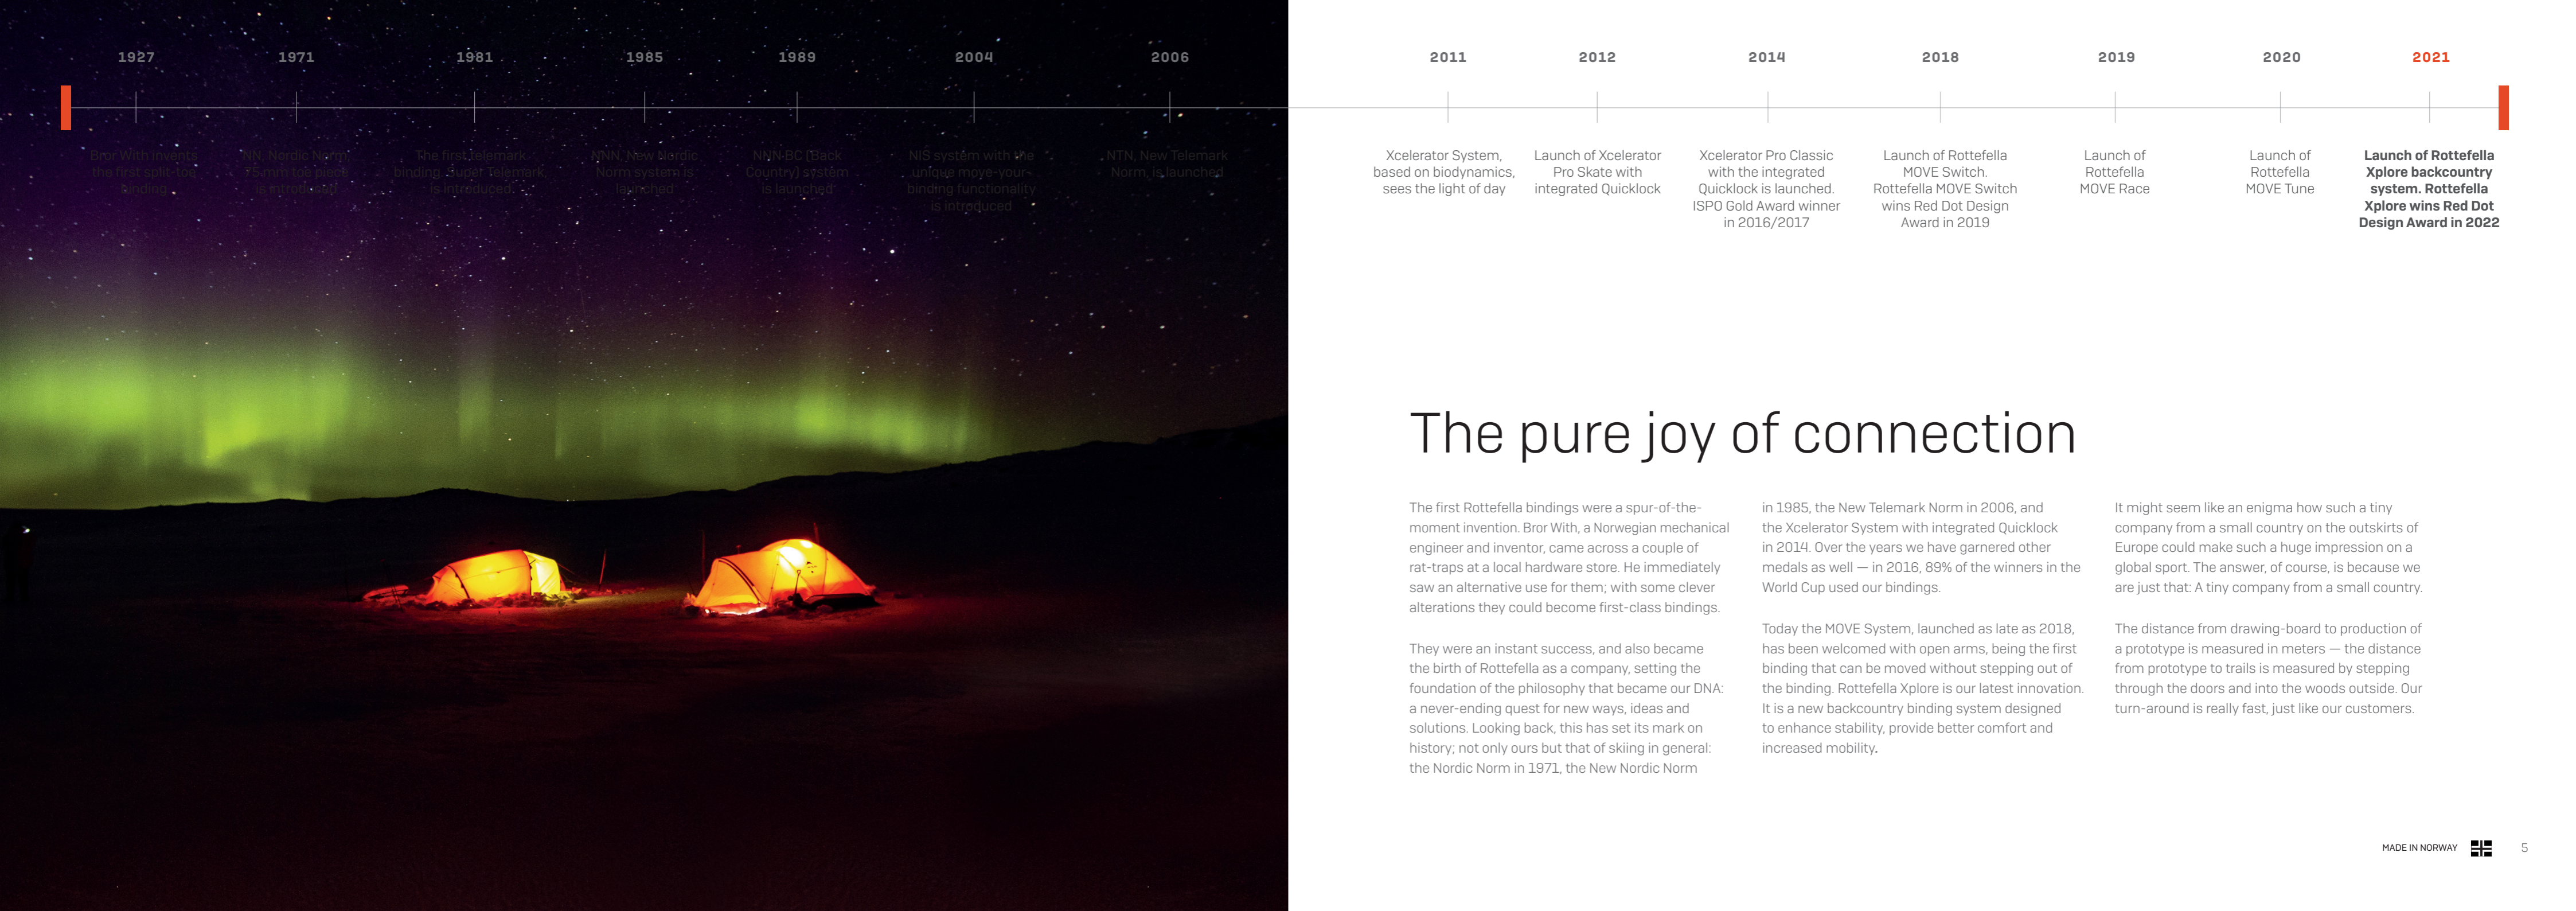

Creating winter wonders since 1927

We want to let everyone join in the endless joys of skiing. The very young, the almost ancient and everyone in between — from world class athletes to people coming straight from a comfy sofa. There are literally limitless ways you can enjoy yourself in the snow, and it doesn't matter if your blood is pumping through your veins when you're running up

a hill, if your adrenaline is rushing through your body speeding down a mountain, or if you're simply moving through the forest at your own pace, or perhaps even just enjoying a hot cup of cocoa. No matter if you're experiencing high speeds or calm tranquillity, the connection between you and the frozen element beneath your feet is so fluid and natural that you

don't even think about it. It's just there. It simply works.

We are Rottefella. Through our bindings, we have made winter accessible for everyone for nearly 100 years. And we will keep innovating for the next 100 years as well.

The pure joy of connection

The first Rottefella bindings were a spur-of-the-moment invention. Bror With, a Norwegian mechanical engineer and inventor, came across a couple of rat-traps at a local hardware store. He immediately saw an alternative use for them; with some clever alterations they could become first-class bindings.

They were an instant success, and also became the birth of Rottefella as a company, setting the foundation of the philosophy that became our DNA: a never-ending quest for new ways, ideas and solutions. Looking back, this has set its mark on history; not only ours but that of skiing in general: the Nordic Norm in 1971, the New Nordic Norm

in 1985, the New Telemark Norm in 2006, and the Xcelerator System with integrated Quicklock in 2014. Over the years we have garnered other medals as well — in 2016, 89% of the winners in the World Cup used our bindings.

Today the MOVE System, launched as late as 2018, has been welcomed with open arms, being the first binding that can be moved without stepping out of the binding. Rottefella Xplore is our latest innovation. It is a new backcountry binding system designed to enhance stability, provide better comfort and increased mobility.

It might seem like an enigma how such a tiny company from a small country on the outskirts of Europe could make such a huge impression on a global sport. The answer, of course, is because we are just that: A tiny company from a small country.

The distance from drawing-board to production of a prototype is measured in meters — the distance from prototype to trails is measured by stepping through the doors and into the woods outside. Our turn-around is really fast, just like our customers.

“The combination, wax skis and MOVE is brilliant. I adjust the binding and prolong the wax”

- Øystein Pettersen, Olympic medalist.

WAX SKIS / MOVE - THE BEST WAY TO ADJUST FOR BETTER GRIP OR GLIDE

SKIN SKIS / MOVE - THE ONLY WAY TO ADJUST FOR BETTER GRIP OR GLIDE

SKATE SKIS / MOVE - FOR MORE STABLE SKIS AND MORE SPEED

Adjust the bindings forwards and the contact with the snow increases, adjust the bindings backwards and the skis are lifted up from the snow, reducing traction.

Waxless, waxable, skate or skin skis? Just MOVE, either way.

Waxing skis is a science. A number of variables will determine the outcome, such as the wax, the air, snow temperature and snow structure – the difference between a great trip and an ordeal can be small. *This is where MOVE changes the ball game. It allows you to move the waxing zone manually – even while you’re skiing.* Thanks to MOVE, a ski outing on poorly waxed skis can become a nice experience. And a ski outing on perfectly waxed skis, fine-tuned with a MOVE binding, will be amazing.

Skin skis take the wax out of the equation. They do not, however, take the benefit of MOVE out of the equation. The skins make the very foundation of the grip. *By adjusting the bindings forward, the skins contact with the snow increases, improving the grip. By moving the bindings backwards, the skis are lifted up from the snow and the traction is reduced, which improves the glide and increases the speed.* This action can be performed continuously, depending on the landscape you’re moving through and the snow conditions.

Are you wondering how MOVE works on skate skis? MOVE Tune Skate is optimal for all snow conditions. When the snow is hard and packed you can move the binding forward for more stable skis that are easier to steer. On looser snow, however, you can move the binding backwards, so the skis float better on top of the snow. What’s not to like?

MOVE fits all skis. By choosing the assembly that fits the mounting plate, just about anyone can move their binding to improve their grip or glide, or better control and speed, without taking off their skis.

What are you looking for? The choice between better grip and glide or do you want to be able to fine-tune your skate skis – what ever you need, you will find a MOVE that suits you.

A MOVE for everyone!

We want everybody to be able to feel how amazing it is when everything simply works. We have poured our hearts and souls into this; immeasurable hours and hundreds of miles during our trials and tests, both by ourselves and by world class skiers. [We know quite a few.]

The result is MOVE, a ski-binding that's flexible in every sense of the word. It lets you be the master of grip, glide, speed and control, by simply adjusting the binding position on the skis for either more or less contact with the snow. The result is both flexible and accessible for everyone.

*NB! Skis with a 3D profile close to the mounting plate without a MOVE Interface cannot be used together with MOVE as the adapter's glue surface will not be affixed correctly.

reddot award 2019 winner

4 POSITIONS FOR GRIP OR GLIDE

ROTTEFELLA MOVE SWITCH

FOR BETTER GRIP OR GLIDE

Rottefella MOVE Switch provides better grip and glide – even when snow conditions change, the wax wears off or the weight load changes, for example when using a backpack or pulling a sled.

For all skis and ski styles*

2 POSITIONS FOR QUICK MOVES

ROTTEFELLA MOVE RACE

FOR MAXIMUM GLIDE IN SECONDS

Rottefella MOVE Race provides immediate glide and prolongs the effect of the ski wax.

For all skis and ski styles*

9 POSITIONS FOR FINE-TUNING

ROTTEFELLA MOVE TUNE

FOR OPTIMAL SKIS IN ALL CONDITIONS

Rottefella MOVE Tune gives you the opportunity to fine-tune your bindings according to snow conditions, the characteristics of your skis, and your technique.

For all skis and ski styles*

The newest MOVE binding, now with step-in function

Introducing Rottfella MOVE Auto

Rottfella MOVE Auto is our latest addition to the MOVE family. With Rottfella MOVE Auto you can easily move your binding for better grip and glide. This new binding has a step in function allowing skiers to enter and

exit easily. The Rottfella MOVE Auto binding fits all MOVE units so whether you are chasing seconds or out for a casual ski trip you will find a MOVE that suits your outing.

NIS 3.0 MOUNTING PLATE & ROTTEFELLA MOUNTING PLATE

Mounting plates with intergrated MOVE Interface allows you to mount MOVE bindings directly on to the skis, without the use of an adapter.

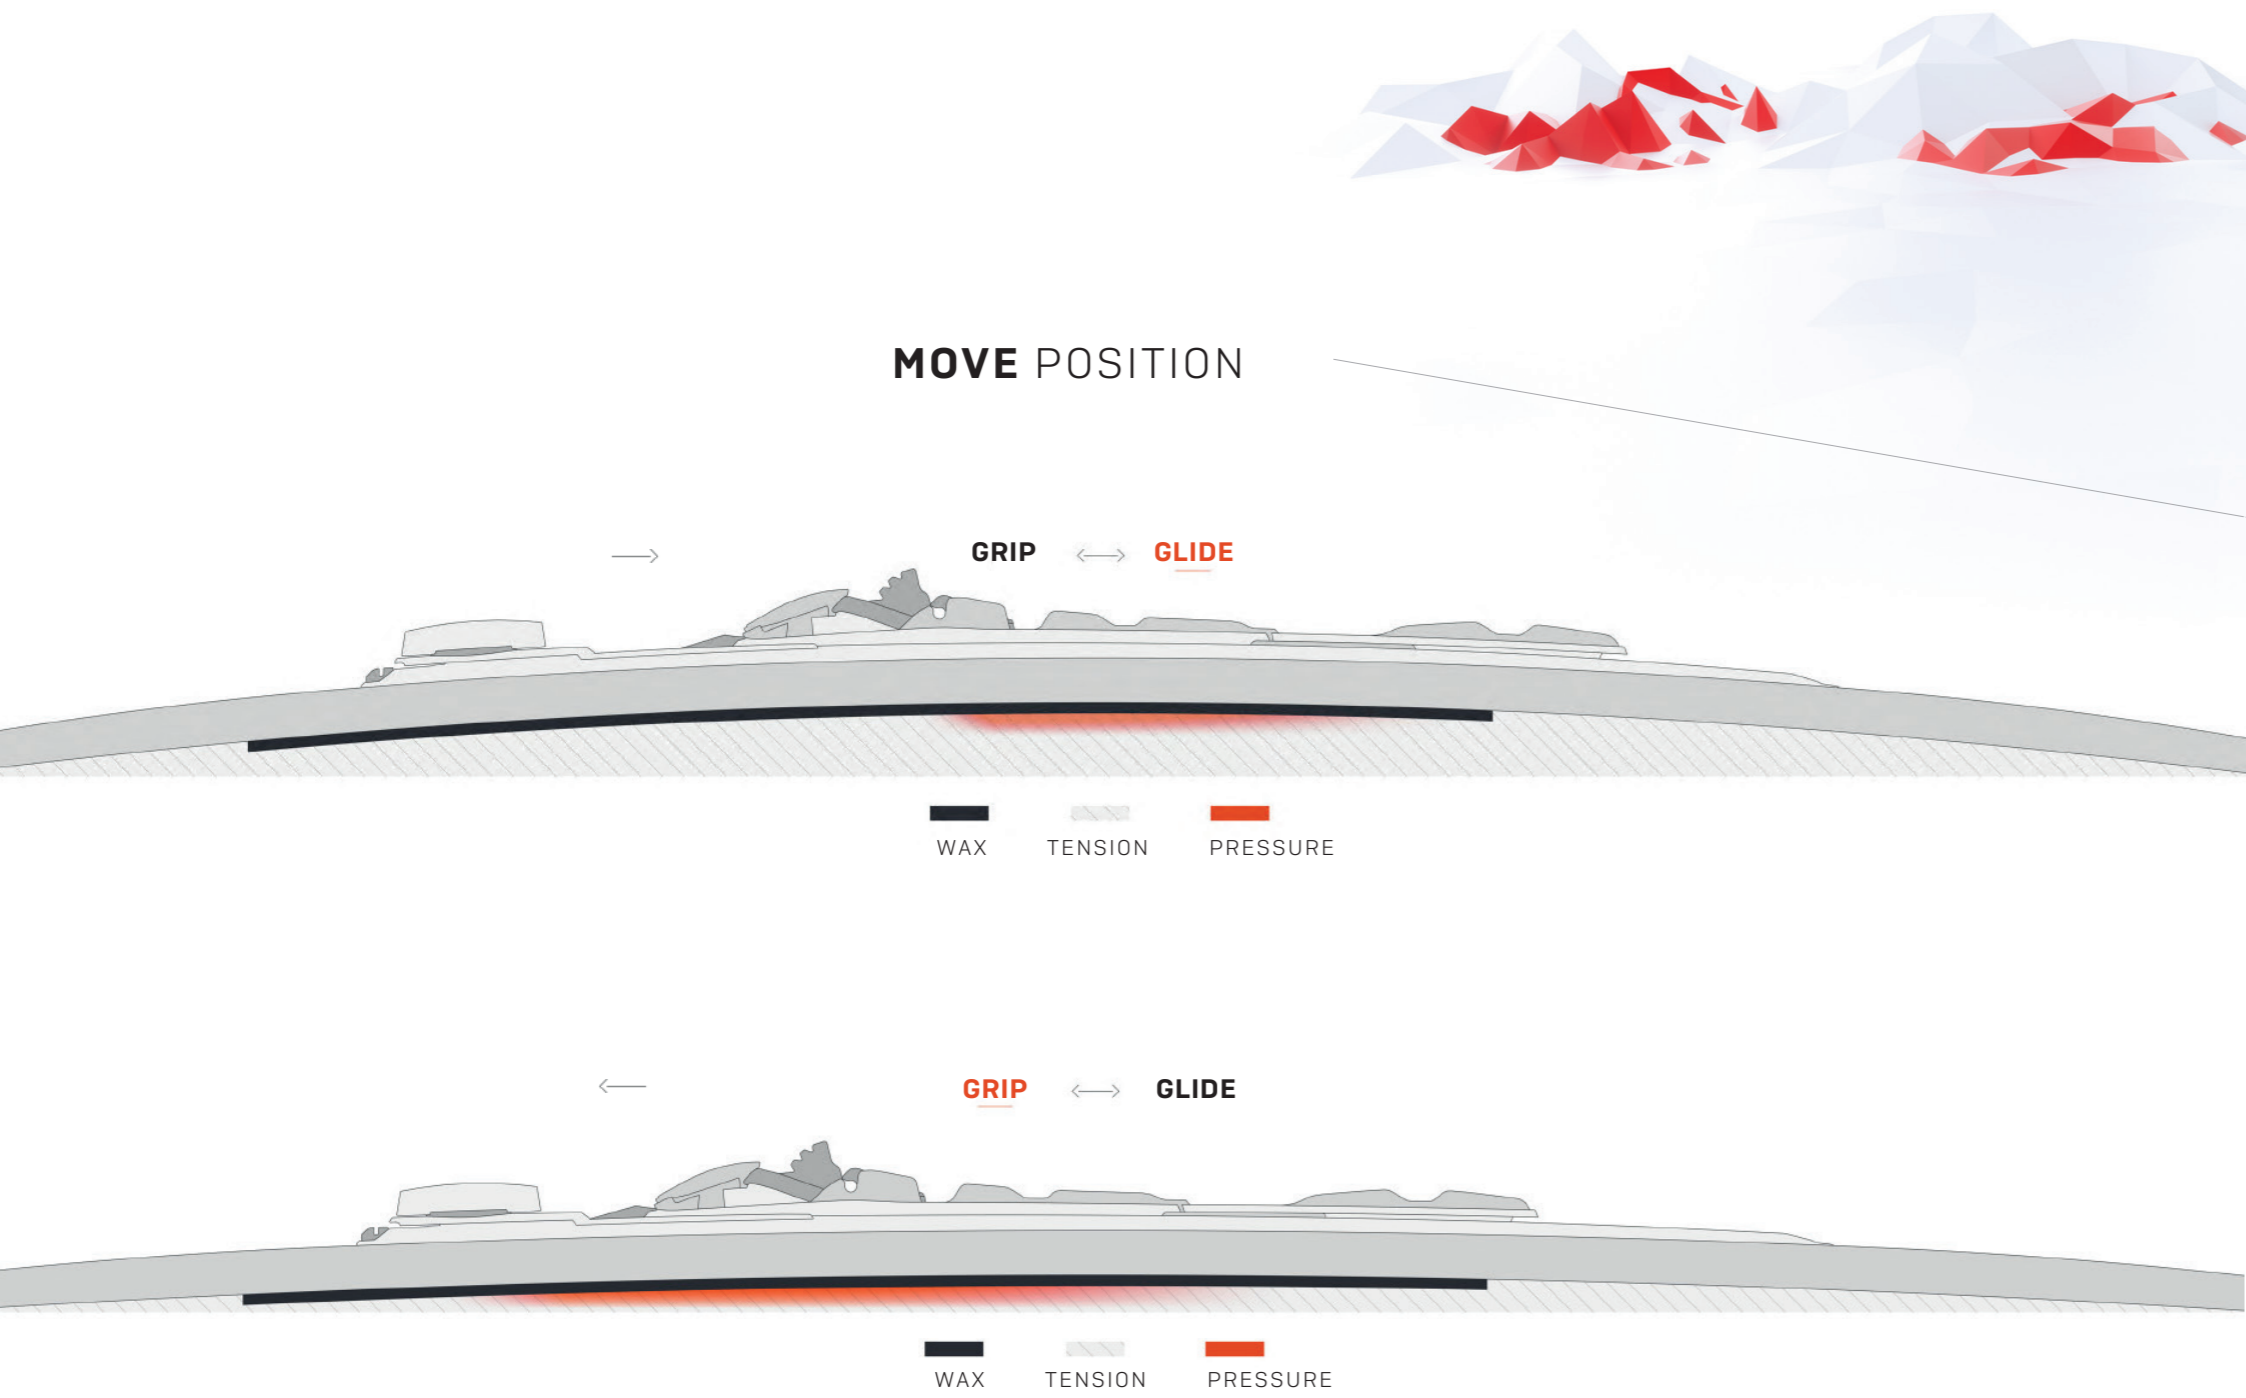

It all starts with the mounting plate

90% of all skis, regardless of the brand, have a mounting plate. They either have a premounted or a screwed mounting plate. Regardless of the mounting plate, you will find a binding that fits.

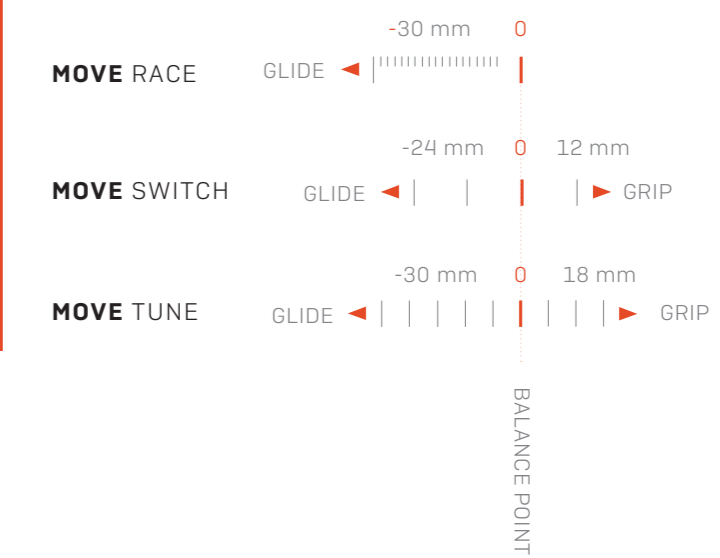

To the left you can see the existing mounting plates on the market today. Some have the integrated MOVE interface, while others will need an adapter. The adapter comes with NIS 1.0 and IFP MOVE binding.

On the following pages you can easily see which binding fits which mounting plates. For assistance ask us, or a sports store with Rottefella products. There is a MOVE for everyone.

*IFP is the property and technology of Fischer Sports GmbH.

MOVE changes the ski's characteristics by increasing or decreasing contact with the surface.

What does MOVE actually do?

Skiing is ruled by the laws of physics, based on a natural distribution of weight and balance. Walking up a steep hill, crossing a frozen field or gliding down a mountainside — every motion you make changes the contact between the skis and the surface beneath them. It makes sense that the position of your binding should be able to change as well.

And that's why Rottefella designed MOVE, as it changes the ski's characteristics. MOVE Race is for those who chase seconds, MOVE Switch is for those who want a great skiing experience, and MOVE Tune is for those who want to fine-tune their skis to any snow conditions.

With Rottefella MOVE, we have developed what we believe will give you the very best experience while skiing. It's the only system on the market that allows you to "change gears" while skiing, and do it with ease. Simply turn or flip the handle.

Rottfella Sport Screw can be screwed directly onto all flat skis.

Probably the lightest screw binding in the world!

Rottfella's Sport Screw is probably the best and lightest screw binding on the market today. It is the ultimate screw binding for flat skis with its light

weight, high durability and easy mountability. Sport Screw comes with an interchangeable flex arm for better control while skiing.

*IFP is the property and technology of Fischer Sports GmbH.

Rottfella Quicklock IFP* fits all skis with IFP* mounting plate!

Rottfella's Quicklock has been one of the most successful bindings in Rottfella's history. The Quicklock enables skiers to move their bindings for better grip or glide, without the use of tools. The binding has been designed for maximum

stability and minimum snow packing. With Rottfella Quicklock *IFP, all skis with a premounted IFP* mounting plate can enjoy these advantages.

ROTTEFELLA
XPLORE

Rottfella Xplore backcountry system for better mobility, stability and a lot more fun!

**ROTTEFELLA XPLORE
BACKCOUNTRY OFF-TRACK**

Changeable flex: Yes
Mounting system: Screw
Shoe Norm: BC Xplore
Art.no.: 10200398

Rottfella Xplore is a new backcountry binding system which will greatly improve your skiing experience. The system provides better mobility when skiing across all types of terrain and greater stability during downhill skiing. This will give you an increased sense of confidence and enjoyment of backcountry skiing.

Rottfella Xplore Backcountry Off-Track is the first binding within the Rottfella Xplore system with the integrated SpringPin technology. The location of the SpringPin in the binding is the key to better stability and mobility for a safer and more comfortable exploration off-track. Enjoy your neighbourhood in a different way. Discover more, and more often, with Rottfella Xplore.

Rottefella Xplore Accessories

The Xplore backcountry binding has interchangeable flex. The flex is a flexible pad which provides bending resistance. It helps you control the skis and gives you a more natural kick-and-return cycle. You can easily change the Standard flex that comes with the binding to Rottefella Xplore Hard Flex for a better experience when skiing downhill by providing increased resistance against the boot

and a more controlled descent. Change to Rottefella Xplore Free Pivot Plate for a maximum range of motion and a more comfortable walking feeling in steeper terrain, and when pulling a pulk. The grease lubricates and maintains the SpringPin mechanism. Essential for easy entry and exit of the Rottefella Xplore binding. We recommend you maintain your SpringPin every season.
